A few examples and convenience macros in LaTeX

Arturo Popoli

February 14, 2023

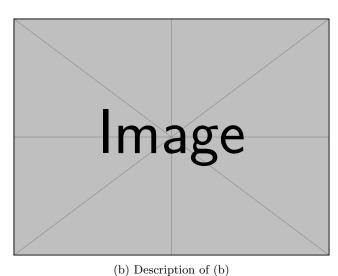

Figure 1: Description of the two images

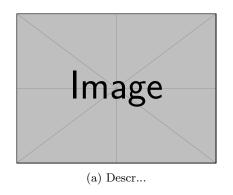

rfield	mobility
6.00E+00	1.90E+00
8.00E+00	1.89E+00
1.00E+01	1.88E+00
1.20E+01	1.88E+00
1.50E+01	1.87E+00
2.00E+01	1.85E+00
2.50E+01	1.84E+00
3.00E+01	1.83E+00
4.00E+01	1.80E+00
5.00E+01	1.76E+00
6.00E+01	1.72E+00
8.00E+01	1.66E+00
1.00E+02	1.60E+00
1.20E+02	1.54E+00
1.50E+02	1.47E+00
2.00E+02	1.37E+00
2.50E+02	1.28E+00
3.00E+02	1.20E+00
4.00E+02	1.10E+00
5.00E+02	1.02E+00
6.00E+02	9.50E-01
8.00E+02	8.50E-01

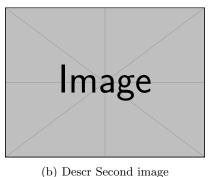

0.1 Two and three figures side by side

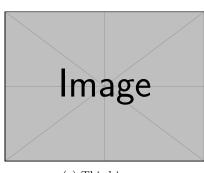

As one can see in Figs. 1 and 2...

0.2 Text colors

Text in Red Text in Blue

(c) Third image

Figure 2: Description of the three images

0.3 **Parenthesis**

$$\left(\sum_{a}^{b}\right) \tag{1}$$

$$\left[\sum_{a=1}^{b}\right] \tag{2}$$

$$\left\{\sum_{a}^{b}\right\} \tag{3}$$

Vector quantities and operators 0.4

Vector Bold ${\bf A}$

Bold arrow $\vec{\mathbf{A}}$

Vector unit $\hat{\mathbf{j}}$

Dot product •

Cross product \times

Divergence: $\nabla \cdot \mathbf{A}$

Curl: $\nabla \times \mathbf{A}$

Gradient: ∇A

0.5**Derivatives**

Differential: dA

Derivative: $\frac{\mathrm{d}f}{\mathrm{d}x}$

Partial derivative: $\frac{\partial f}{\partial x}$

Chemistry 0.6

AP macros loads the mhchem package

$$Xe + e^- \longrightarrow Xe^+ + 2e^-$$
 (4)

0.7 Numbers

AP macros loads the sinunity package, which allows to specify the desired precision. If round-precision = 2, \num{3,1415926535} displays 3.14.

Only number: 3.14

Number and units: $6.02\times10^{-19}\,\mathrm{N\,m^{-2}}$

Only units: C

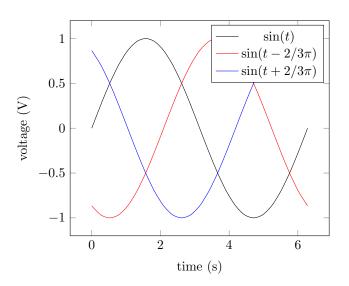

0.8 Options for AP macros

As in Physics package, default options are:

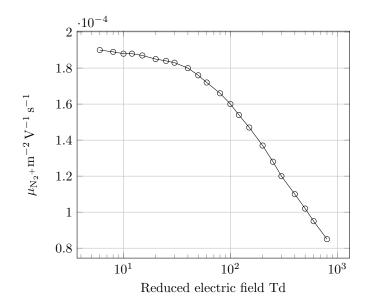

\ExecuteOptions { trig , uprightdiff , bolddel }

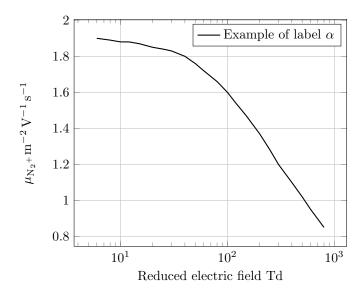

Just remove bolddel to get back to non-bold vector operators.

0.9 Plotting analytical functions

0.10 Plotting from tabulated data

0.11 Plotting data in external .csv file
